Objective

Motivated final year Computer Science student with a solid foundation in software development and data science. Proficient in C++, JavaScript, and Python, with a strong passion for emerging technologies and problem-solving. Seeking opportunities to contribute to innovative projects in software development and artificial intelligence, while continuously expanding my technical and professional skills.

Education

National University of Computer and Emerging Sciences

Bachelors in Computer Science

CGPA: 3.3/4

Karachi, Pakistan

August 2022 – June 2026

Relevant Coursework: Programming Fundamentals, Object-Oriented Programming, Data Structures, Operating Systems, Software Engineering, Artificial Intelligence, Data Science, Database management system, Deep Learning, Agile Software Project Management, Computer Networks, Information Security, Recommender Systems.

Honors and Awards:

- Dean's List holder at FAST-NUCES for achieving a 3.5+ SGPA.
- Secured 97.7 percentile in the HEC-P@SHA National Skill Competency Test.

Pakistan International School

Pre Engineering

Honors and Awards: Overall first position in Intermediate.

Jeddah, Saudi Arabia

August 2008 – June 2022

Skills Summary

Programming Languages: C/C++, JavaScript, Python, Sql.

Frameworks: React JS, Angular, Node JS, Next JS, Pandas, FastAPI, Bootstrap, Material UI.

Core Skills: Data Structures, Object Oriented Programming, Data Science, Database, AI/ML.

Tools: Jupyter Notebook, Google Colab, Papyrus, Oracle, MS Office, VS Code, Supabase, Git.

Soft Skills: Team Work, Management, Problem Solving, Communication.

Work Experience

Software Developer Intern — Vison71 Technologies

2025-Present

- Developed and optimized MERN stack applications.
- Designed engaging 3D web experiences using Framer and Spline.
- AI integration via Hugging Face and n8n.

Teaching Assistant — FAST-NUCES

2025-Present

- Assisting in delivering lectures and explaining complex concepts to students.
- Conducting lab sessions and grading assignments/quizzes to ensure student learning.
- Providing one-on-one support to students struggling with architectural concepts.

Projects

Enerlytics — Final Year Project [\[LINK\]](#)

- Developed an AI-driven electricity forecasting and recommendation system for K-Electric consumers using ensemble deep learning models TFT + Bi-LSTM.
- Built a full-stack web application using Next.js, FAST API and Supabase, including an asynchronous billing-data scraping pipeline, usage forecasting engine, slab-aware recommendation system, and interactive consumer dashboard.

AiR Travel [\[LINK\]](#)

- Built using MySQL, Express.js, Angular, and Node.js to ensure a robust and scalable flight booking system.
- Implemented JWT authentication, and features like flight search, booking, and ticket management.

EZ Travel [\[LINK\]](#)

- Built a Red Bus route optimizer using FastAPI and React, using A* search to find the shortest and cheapest routes
- Computed stop distances using OpenStreetMap data and Haversine formula with a clean, responsive UI.

Employee Attrition Prediction System [\[LINK\]](#)

- Built an AI-powered Employee Attrition Prediction system using XGBoost, integrated with FastAPI and React.js
- Designed an end-to-end ML pipeline for real-time attrition insights from monthly/quarterly employee surveys.
